GOAL

Seeking an Entry Level Position where the JAVA language is at the heart of the company's development stack. I'm a self-taught, hard working, self-motivated type who believes in furthering my skill-set continuously. If I don't already know how to do it, I will soon.

SKILLS

Java
git/Github
Eclipse
Android
Android Studio
Gradle
Ant
ProGuard 5.0
JavaFX 8
SceneBuilder 2.0
Selenium (WebDriver)
Python 2.7
PyCharm
HTML/CSS
PHP/MySQL

PROJECTS

a) "FBI Prank!"

Description: an ANDROID app, that allows you to "Prank your friends by putting them on The FBI's Top 10 Most Wanted list!"

git repo: https://github.com/CountDooku/fbi_prank_app

get it on Google Play!: https://play.google.com/store/apps/details?id=io.github.countdooku.fbi_prank_app

b) "PTC bot"

Description: a program written with the MVC Design Pattern in a project utilizing Java 8 in Selenium 2, with a GUI written in Java FX 8 using e(FX)tooling in Eclipse. It is a bot that runs autonomously to make real money that can be deposited to a personal paypal account.

git repo: <https://github.com/CountDooku/PTCbot>

c) "pcgScraper"

Description: a Python-based program that automates tasks in a headless browser (using mechanize), with a GUI (Tkinter), for the purpose of data-mining HTML on a web page.

git repo: <https://github.com/CountDooku/pcgScraper>

BUG-REPORTS SUBMITTED

I've submitted a bug report, as well as a backwards-compatibility issue to Oracle, via Jira, regarding it's product SceneBuilder 2.0

a) <https://javafx-jira.kenai.com/browse/DTL-6753> (backwards compatibility issue submitted by myself as a low-priority item, they quickly escalated it to medium. Current Status: solved, and solved fast by Oracle)

b) <https://javafx-jira.kenai.com/browse/DTL-6752> (this was more of a Design Pattern setback than anything. As it stood, there was a limitation inherent to SceneBuilder 2.0, which prevented developers from developing with a true MVC Design Pattern. Current Status: not yet solved by Oracle, but promised to all with the release of SceneBuilder 3.0)

GIVING BACK TO THE COMMUNITY

luaforums.com: a “stack-overflow like site” for the LUA programming language, which I decided to set up, as I realized there was no comparison- in terms of format- other than StackOverflow for the LUA scripting language.

REDDIT: I've submitted a quick, crash-course tutorial to Reddit which received a healthy amount of upvotes (per it's rating system) on how to read, and work with API's:

[https://www.reddit.com/r/learnprogramming/comments/2fcbr2/where can i learn about how to use apis/](https://www.reddit.com/r/learnprogramming/comments/2fcbr2/where_can_i_learn_about_how_to_use_apis/)
